

## STANDARD SPECIFICATIONS

Every Airstream is built to the same rigid construction standards and must satisfy the travel specifications of the world's most adventurous roamers—the Wally Byam caravanners. Chassis, running gear, body design and basic equipment are uniform throughout all Airstreams, regardless of model or series. All Airstreams are completely self-contained...they have the equipment necessary for extended stays away from standard light, water and sewer connections. The difference between the Land Yacht series and the International Land Yacht series is in the degree of self-containment, amount of accessory equipment included and quality of interior furnishings.

The Airstream Land Yacht series comes equipped with a pressure water system (including 12V air compressor), 12V electrical system (in addition to the regular

110V wiring and fixtures), 12V battery, butane refrigerator, butane water heater, automatic switch-over regulator for the butane tanks, marine type toilet with spray flushing device to conserve water, and the Airstream sanitarior to provide toilet conveniences away from a sewer hook-up. Even a sewer hose carrier is included.

The Airstream International Land Yacht series represents, then, the last word in travel luxury. In addition to the basic Land Yacht equipment, it includes: a water purifier; a 12V-110V ceiling ventilator fan and a 110V ceiling ventilator fan; a 12V-110V stove exhaust fan; a 12V outlet for shaver and other appliances; two over-sized butane tanks; a police-type radio antenna; a 12V exterior flood light next to the entrance door; and such extra luxuries as stainless steel galley sinks, deluxe plumbing hardware, galley hand spray, bedroom wall comfort cover, bedspreads, nylon upholstery, Belgian linen curtains, vinyl floor tile and even deluxe hub caps.

- Patented Air-Flow contoured shape
- Exclusive Aerostress® all steel undercarriage
- Molded steel bumper, welded to undercarriage
- Exclusive Dura-Torque® rubber torsion bar axles
- Shock absorbers on all wheels
- 12V Electric brakes on all wheels (can be co-ordinated with foot brake pedal in car)
